HOW CAN HOME TELEHEALTH BENEFIT MY PATIENTS?

- May give patients confidence and may improve their ability to stay independent in their home.
- Encourages patients to be active in their own health care by reinforcing positive behavior and compliance.
- Educates patients about their disease by giving key health messages related to their condition.
- May provide patients peace of mind knowing that their health status is being monitored every day.
- May improve patients quality of life by promoting and encouraging self-management skills.
- May keep patients out of emergency rooms and hospitals.

Contact us today and ask how your patients can participate in the home telehealth program.

HOW CAN HOME TELEHEALTH BENEFIT MY PRACTICE?

- Monitors your patient’s symptoms daily and immediately transmits that data to your office so you can manage their condition at home.
- Alerts you to changes in your patient’s condition so you can potentially intervene early to help avoid unscheduled hospitalizations and emergency room visits.
- May help identify trends in health data to allow you to coordinate care and adjust treatment plans as needed.
- Allows you to personalize care for your patients by giving you the ability to send customized messages and reminders.
- Encourages patients to adhere to the prescribed care plan by reinforcing healthy behavior.

EASY AS 1, 2, 3

1. Heart failure patients use the interactive system each day in their home to monitor their vital signs and symptoms. A clear, friendly voice prompts them to respond to a daily Health Check. Takes only minutes a day.

2. A patient’s daily health information collected and securely transmitted through a cellular network or a standard telephone line to the telemonitoring nurse.

3. The detailed health data is analyzed and alerts the appropriate healthcare professional to decide if the patient requires a change in medication or treatment plan.
